

Task 1: Business Sales Performance Analytics

1. Executive Summary

This project focuses on analyzing business sales data using Power BI to evaluate sales performance, revenue trends, customer purchasing behavior, and product performance. An interactive dashboard was developed to help business owners monitor key performance indicators (KPIs), identify high-performing products, and make data-driven decisions to improve business growth and profitability.

2. Business Objective

The main objectives of this project are:

- ❖ Analyze overall business sales performance.
- ❖ Identify top-selling products based on revenue.
- ❖ Compare sales across different countries and product categories.
- ❖ Track revenue trends over time.
- ❖ Generate actionable business insights for decision-making.

3. Dataset Information

Dataset Name: Online Retail Dataset

Source: Kaggle

Dataset Type: E-commerce Sales Data

Number of Records: 401558

Important Columns

- ❖ Invoice Number
- ❖ Customer ID
- ❖ Product Description
- ❖ Quantity
- ❖ Unit Price
- ❖ Invoice Date
- ❖ Country

- ❖ Revenue (Created Column)

4. Data Cleaning Process

The following data preparation steps were performed before analysis:

- A. Imported the CSV dataset into Power BI.
- B. Removed duplicate records.
- C. Removed rows with missing Customer IDs.
- D. Removed blank values.
- E. Corrected data types for numerical and date columns.
- F. Created a Revenue column using:
 $\text{Revenue} = \text{Quantity} \times \text{Unit Price}$
- G. Verified data accuracy before visualization.

5. Dashboard Overview

The Power BI dashboard includes the following visualizations:

KPI Cards

- ❖ Total Revenue
- ❖ Total Orders
- ❖ Total Customers
- ❖ Average Order Value

Revenue Trend

A line chart displaying monthly revenue trends to identify seasonal sales patterns.

Top Products

A bar chart showing products that generated the highest revenue.

Country-wise Sales

A visualization comparing revenue generated across different countries.

Category/Product Performance

A chart highlighting product-wise sales performance.

6. KPI Summary

The dashboard tracks the following Key Performance Indicators:

- Total Revenue:-8,23,000
- Total Orders:-22,000
- Total Customers:-4354
- Average Order Value:-374.09
- Highest Revenue Product:-Regency Cakestand 3 Tier

7. Key Insights

1. The business generated **₹8.23 Million** in total revenue from **22,000 orders**.
2. A total of **4,354 unique customers** contributed to sales.
3. **REGENCY CAKESTAND 3 TIER** is the highest revenue-generating product with **132K** in revenue.
4. Revenue increased significantly from **September to November**, with **November** being the best-performing month.
5. Monthly orders also peaked in **November**, showing strong customer demand.
6. A small group of customers contributed a large share of total revenue, indicating valuable repeat or high-spending customers.
7. The business sold approximately **5 Million** product units during the period.

8. Recommendations

1. Increase inventory and marketing for **REGENCY CAKESTAND 3 TIER** and other top-selling products.
2. Launch promotional campaigns before the high-sales months (September–November).
3. Reward top customers with loyalty programs and exclusive offers.
4. Improve sales during low-performing months such as February and April through discounts and seasonal campaigns.
5. Analyze low-performing products and reduce excess inventory.

9. Conclusion

This dashboard provides a clear overview of business sales performance by tracking revenue, orders, customers, products, and monthly trends. The insights help management identify top-performing products, understand seasonal demand, and make data-driven decisions to increase revenue and improve customer satisfaction.
